110V. ALGER-LITE

NEW Footswitch Installation Instructions

Footswitch comes with 6 ft. cable containing 5 colored wires.

Determine the approximate position where the footswitch is to be most conveniently located on the floor. You may trim end of cable to proper length to reach from footswitch location on the floor to the electrical make-up box if you feel there is excess cable length.

Connect wires in make-up box as shown below **making sure** the colors correspond as shown. **NOTE:** If opposite direction of the footswitch is desired (i.e. left handed operator) switch the **black** and **brown** wires from the footswitch.

CAUTION:

- Care should be taken that cable does not interfere with any movement of the chair base.
- Be careful not to step on the cable repeatedly as the wires inside could become abraded and short out causing a possible fire hazard. Be aware that the cable is conducting **110V.**
